- Notes:
- * A team would only travel to 2 out of 4 of their longest trips per year
 - * Saves an estimated avg 8-12 hours of travel time per year for each team
 - * Rotate game location against a common opponent every year, still utilizing the matrix we have used for years
 - * This model helps with rotation of location, trip length, and bus costs, however there will be an imbalance of multiple games in a row at home or away
